voyager

Your Cargo Control Center

Every voyage is a project where you and your stakeholders can execute hundreds of tasks and workflows to get cargo efficiently from A to B. Voyager's workflow engine can be rapidly deployed to capture, analyze and visualize data across your global marine operations.
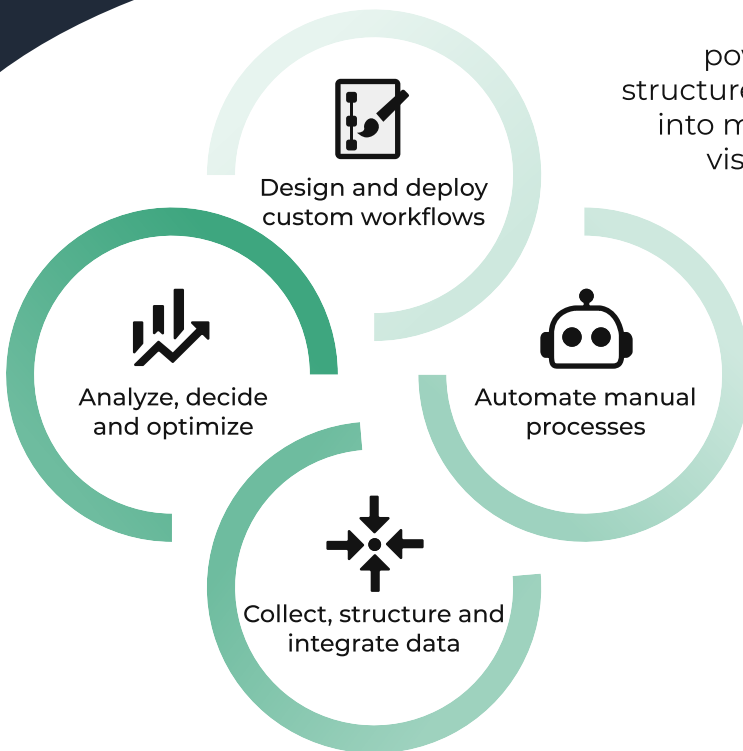

Elevate your marine operations and decision making from emails, spreadsheets and manual ERP entries to a fully digital experience.

Why Voyager?

95% of your marine supply chain data is sitting in email, PDFs and XLSs. This data contains critical decision making information.

Most companies will never utilize the power of this data. Voyager customers collect and structure data while they work, providing deep insights into marine operations. Data silos are eliminated and visibility is extended across the supply chain from production to the end customer.

Industries we serve

Design and deploy custom workflows

Analyze, decide and optimize

Automate manual processes

Collect, structure and integrate data

Increase operational and supply chain visibility

Reduce working capital

Increase team productivity by 30%

Capture 100% of your marine data

4x Voyager is 4x faster to deploy than leading marine ERPs

Product capabilities

- Low-code workflow generation engine
- Process automation and integrations
- Inventory management
- Demurrage tracking and analysis

- Voyager operations management
- Financial reporting and cost tracking
- Vessel planning, forecasting, and scheduling
- Document processing and management
